Know where the part is before the tech calls you.

A paper-thin label goes on the box and reports its own location. Every carrier, one live map. No app, no integration.

The problem

An AOG part. A loaner tray for Thursday's surgery. A repair unit going back to a customer. A rental that has to come home. Someone is waiting on every one of them.

Carrier tracking only updates when someone scans the box. Between scans you're guessing, and your team is on the phone.

What you get

- **Live location.** Cellular labels report every 20 minutes by default, accurate to tens of yards.
- **One map for every carrier.** The label is yours, so it doesn't matter who's moving the box.
- **Alerts that matter.** Geofence alert when it reaches the site. Deadline alert when it doesn't.
- **A link for whoever's waiting.** Send the tech or customer a live view. Nothing to install.
- **A record.** Every position it reported, with times. Useful if you have to file a claim.

Why not AirTags?

- No "Found Moving With You" alerts on drivers' or receivers' phones.
- Whoever finds it can't switch it off.
- Your whole team sees every box on one map, with alerts. Not one person's phone.

A good fit if you

- Ship 5 to 200 high-value or time-critical boxes a month
- Have someone waiting on the other end
- Use more than one carrier, courier or LTL
- Ship aircraft parts, medical loaners and repairs, rental gear, or electronics and data-center hardware

Setup takes a minute

Stick it on next to the shipping label. Tap it with a phone. Pick the job or PO. Done. Airline approved, so it flies with the part.

Pricing Map, alerts, share links and your whole team are included. No seat fees. Volume pricing available, contact us.

$35/label	$15/label	$149 Pilot Pack
Cellular. For the box you can't lose sight of.	Bluetooth. For the routine flow.	10 Bluetooth labels.

Try one free.
We mail you a sample label, already switched on, and send a live-map link. US only for now.
